Key Finding Comparisons/Special Notes

- During investigations of two reported enteric disease cases (Campylobacteriosis and E. coli STEC), exposure histories identified multiple local food establishments. As a result, follow-up inspections were conducted by the Environmental Health Division at seven (7) Sandusky County food establishments to assess potential public health risks.
- The week of May 17–23 marked the conclusion of the influenza surveillance season. A final influenza season summary report will be prepared and distributed next month.
