

Blood Lead Testing Requirements For Ohio Children less than 6 Years of Age

There is no safe level of lead in the blood.

- All capillary (finger/heel stick) test results $\geq 3.5 \mu\text{g/dL}$ must be confirmed by venous draw. Point of care instruments such as the LeadCare® II cannot be used to confirm an elevated blood lead level, even if the sample is collected by venipuncture.
- Any confirmed level of lead in the blood is a reliable indicator that the child has been exposed to lead.
- All blood lead test results, by law, are required to be reported to ODH by the analyzing laboratory.
- The Ohio Healthy Homes and Lead Poisoning Prevention Program will respond accordingly to all blood lead levels of $3.5 \mu\text{g/dL}$ or greater.
